

Sousek Named JSA Turfgrass Research Facility Manager**April 16, 2015**

The UNL turf program welcomes Matt Sousek as the new John Seaton Anderson Turfgrass Research Facility Manager. Many of you know Matt for his dedication to turf research and his engagement with turf managers and producers throughout the state of Nebraska. Matt has been an integral cog of the turf program for the past six years and in that time has worked alongside several faculty, staff, students and industry professionals. He is often credited with making the research faculty “look good”, in part, due to the responsible way he coordinates research. Matt’s years of turf and project management experience gave him the tools needed to excel as the new farm manager and we are excited about the enthusiasm he brings to the position. This is clearly a time of transition for the turf program in the wake of Lannie Wit’s retirement and Zac Reicher’s move to private industry. Along with the other members of the turf program, Matt adds to the stability and continuity of the program and we are thrilled that he is assuming this important leadership role. Matt is committed to Nebraska turf and in his own words, he will “make every effort to preserve the relationships and support of the turf industry in Nebraska and surrounding states that has been without a doubt the reason why our turf program has and will continue to do great things.” Please join us in welcoming Matt into his new position.

Keenan Amundsen, Assistant Professor, Turfgrass Genetics, kamundsen@unl.edu
