

**Comprehensive winterkill guide just posted to 2014 Winterkill Update at <http://turf.unl.edu/>
March 10, 2014**

From desiccation and crown hydration in the Great Plains to extended ice/snow cover in the east, we are expecting the worst from this winter's effect on cool-season turf (but hoping for the best). In the new 2014 Winterkill Update section at <http://turf.unl.edu/>, we just posted a comprehensive guide to winterkill damage and more importantly, what to do for recovery in the short- and long-term. Topics include the how's and why's of winterkill; reseeding strategies; choosing species/mixes for reseeding; controlling *Poa*, goosegrass, crabgrass, and broadleaves in seedling turf; and much more. Let us know if we can help.
